

Paint Remover for Effective Industrial Surface Preparation

Industrial maintenance often requires the removal of aged coatings, varnishes, carbon deposits, adhesives, and other stubborn residues from equipment and components. Proper surface preparation is important before repainting, repair, or recoating. StarBlaze 11C03 is a solvent-based foam-gel formulation developed for demanding industrial maintenance applications. The [paint remover](#) penetrates quickly to loosen sticky, aged coatings and supports efficient cleaning during maintenance and overhaul work.

Effective Removal of Aged Coatings

Removing old coatings can be challenging, especially when several layers have accumulated over time. StarBlaze 11C03 is designed to help loosen aged paints, carbon, dirt, motor varnishes, and gaskets. Its formulation works by penetrating and lifting coating layers progressively, making surface preparation more manageable. The paint remover is suitable for applications where controlled and thorough removal is required before repair or repainting.

Convenient Aerosol Application

The specialised aerosol delivery of StarBlaze 11C03 allows targeted application and controlled coverage. Its excellent cling on vertical surfaces helps reduce unnecessary runoff and product waste during cleaning operations. This feature can be useful when maintenance work involves equipment or components with difficult-to-reach or vertical surfaces. The paint remover provides a practical format for maintenance teams that need an easy-to-apply solution for cleaning and coating removal.

Versatile Industrial Applications

StarBlaze 11C03 is suitable for diverse substrates, including metals, wood, and gaskets. It can be used in electrical maintenance and repair, motor rewinding shops, engine overhaul workshops, general industrial equipment maintenance, and OEM and MRO facilities. The paint remover can support processes such as carbon deposit removal, varnish and adhesive stripping, degreasing before repainting, servicing engine components and insulators, and preparing surfaces for recoating.

Useful for Maintenance and Recoating

Effective preparation can make subsequent repair and recoating processes more efficient. By helping remove unwanted coatings, deposits, and residues, StarBlaze 11C03 supports maintenance operations where clean surfaces are required. Its foam-gel formulation and controlled aerosol application make it suitable for targeted cleaning tasks. The product is also available in 330 ml, 400 ml, and 500 ml packs, providing different options for industrial users depending on their requirements.

StarBlaze 11C03 for Professional Cleaning

For industrial maintenance professionals, having a suitable coating-removal solution can simplify demanding cleaning and overhaul tasks. StarBlaze 11C03 combines rapid penetration, effective loosening action, vertical-surface cling, and convenient aerosol application. Its non-CFC formulation is designed for user-friendly industrial use. The paint remover is therefore suited to maintenance environments where aged coatings, varnishes, carbon deposits, and other residues need to be loosened before repair, repainting, or recoating.
